Mobile Safety Check-In

Automate Safety Clearance & Increase Awareness.

Meet Engage by Cell's new solution designed to help companies streamline safety protocols and enable employees to submit check-ins seamlessly.

With our SaaS platform, employees and visitors scan a QR code to a safety check-in form via computer, tablet, or smartphone. The check-in form is fully customizable.

Once submitted, visitors receive a clearance pass and admins can access the information immediately to verify entry. The admin dashboard displays real-time updates on employee or visitor check-ins.
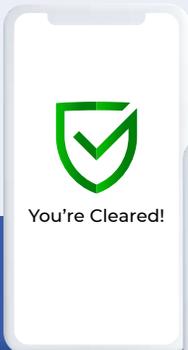

Our software reduces potential exposure to hazards and increases compliance with safety protocols, reducing the risk of incidents.

Use-Case Example

A large pipe manufacturer had no efficient way to ensure that truck drivers were aware of and acknowledged the on-site safety standards. By utilizing the Mobile Safety Check-In the organization created an efficient process for ensuring safety standards. Drivers scan a QR code and complete a safety exam before entering. The organization's environmental manager says,

"We can now ensure that all visitors are aware of and acknowledge our safety protocol, which would have been impossible without our Engage by Cell platform. That is huge for efficiency, and liability."
