Engage by Cell Achieves TX-RAMP Certification, Reinforcing Commitment to Security and Compliance

Austin, TX – April 10, 2025 – Engage by Cell, a leading provider of mobile engagement solutions for workforce, education, and public sector organizations, is proud to announce it has earned TX-RAMP certification from the Texas Department of Information Resources (DIR).

The Texas Risk and Authorization Management Program (TX-RAMP) is a statewide program that establishes standardized security requirements for cloud products and services used by Texas state agencies, public universities, and community colleges. Engage by Cell's certification confirms that the company meets or exceeds the rigorous security and data protection standards mandated by the state of Texas.

"With TX-RAMP certification, we are excited to expand our support for Texas public sector organizations that rely on trusted and secure cloud-based mobile tools," said David Asheim, CEO of Engage by Cell. "This certification validates our ongoing investment in robust security practices, and it opens doors for broader adoption across government, education, and workforce development initiatives."

Engage by Cell's platform includes secure text messaging, mobile web apps, digital wallet cards, GPS-enabled maps, and more—all designed to improve outreach, engagement, and communication with job seekers, program participants, and the general public. With TX-RAMP certification in place, state and local agencies in Texas can now confidently implement Engage by Cell's solutions, knowing they align with Texas's strict cybersecurity protocols.
